

ASTER Expedited Data Set (EDS) Graphical User Interface (GUI) Users Guide

The Web address for the ASTER EDS GUI is

<https://astereds.cr.usgs.gov/>

Detailed ASTER Expedited product descriptions are available at:

https://lpdaac.usgs.gov/products/aster_products_table

Brief descriptions of the fields present in this GUI are described below. Please direct questions to [LP DAAC User Services](#) .

System Messages: <Notifies users of known system related issues that may delay the display or receipt of expedited data.>

Date Range: <Displays the start and end, date and time range of data displayed in the chart, which represents a period of approximately 72 hours.>

The fields present in the chart are described here:

EDS ID <Contains a unique identifier that is replaced with a Data Acquisition Request (DAR) ID or Science Team Acquisition Request (STAR) ID where applicable>

Map <Clicking on the icon in this field displays a footprint to quickly identify the coverage area. The link "Click to view acquisition details", which displays above the footprint, accesses the Acquisition Details page.>

Access Data <This field contains two icons; the one on the left displays the Acquisition Details page, which provides download access to the browse, data, and associated metadata; the icon on the right displays the associated level zero (L0) file names, when hovered over with the mouse pointer. These L0 files, which are also listed at the bottom of the Acquisition Details page, are used as input to build the L1AE and L1BE products, and are not distributed.>

EDS RANGE (date/time) <This field displays the start and end, date and time range for scheduled acquisitions.>

LO FILES (AST_EXP) <There are four potential L0 files associated with each acquisition request that represent the VNIR1, VNIR2, SWIR, and TIR sensors. The number collected will depend on the acquisition request. This field displays how many are expected versus how many are archived.>

L1BE PRODUCTS <The number of products expected to be generated, and the actual number archived.>

Note: The last 30 days of Expedited data are available in the ASTER directory of the [LP DAAC DataPool](#).
